PROFESSIONAL SUMMARY

Full-Stack Engineer with 3+ years of experience designing, building, and deploying scalable web applications with **React, Next.js, Node.js, REST APIs, and PostgreSQL**. Supports a live cloud-hosted platform used by 50+ organizations and 2,000+ users, owning features end to end from requirements to CI/CD-driven production deployment. Resolved 150+ production incidents, optimized slow database workflows down to seconds, and led zero-data-loss migrations of 14,000+ records. Collaborates daily with global (Australian) stakeholders to turn business requirements into technical solutions, maintains code quality through automated testing (Pytest, Playwright) and code reviews, and uses AI coding assistants such as Claude Code to speed up development and debugging.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL
Frontend: React, Next.js, Redux Toolkit, Context API, Tailwind CSS, Bootstrap, HTML5, CSS3, responsive design
Backend: Node.js, Express.js, RESTful API design, Django, Django ORM, Strapi (headless CMS), Firebase
Databases: PostgreSQL (schema design, query optimization, migrations), MySQL, SQLite
Cloud & DevOps: Microsoft Azure, Vercel, GitHub Actions (CI/CD), staging/production environment management
Testing & Quality: Pytest, Playwright (end-to-end browser automation), regression and smoke testing, code review
Security & Integrations: Environment configuration, encrypted local storage, compliance checks, Salesforce, Google Sheets API
AI-Assisted Development: Claude Code for code generation, refactoring, debugging, and test writing
Mobile: React Native (CLI), AsyncStorage, Android Studio, Xcode, App Store & Play Store releases
Tools: Git, GitHub, Postman, pgAdmin, data migration & validation, production support

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Intergy Consulting, Australia (Remote) **Aug 2025 – Present**

Stack: React, Next.js, Node.js, Python, Django, PostgreSQL, Strapi, Salesforce, Azure, GitHub Actions

- Maintain and extend a live, cloud-hosted care-sector platform serving 50+ organizations, 300+ clinicians, and 2,000+ users, with matching logic that pairs support workers to clients by skill, location, and availability.
- Took ownership of an inherited production codebase after a one-month handover; triaged and resolved **150+ production incidents** by priority and shipped hotfixes from code change to deployment through the CI/CD pipeline.
- Optimized PostgreSQL queries and API logic in the service-creation workflow, cutting a long-loading process to **completion within seconds**.
- Removed the platform's dependency on Salesforce by redesigning the core service-validation logic and REST APIs from scratch, moving live operations onto the in-house Django and PostgreSQL system.
- Led scripted data migrations of ~8,000 records to staging and ~14,000 to production, using a custom dry-run comparison script and 5+ validation stages to block duplicates, with **zero data loss**.
- Managed separate staging and production environments and integration configuration during the migration; fixed a cross-timezone scheduling defect so appointments display in each service's own time zone.
- Work directly with Australian stakeholders every day on requirements gathering and live support, and partner with the client's Salesforce developer to plan and execute integration work.
- Use AI coding assistants (Claude Code) to accelerate debugging, refactoring, and test writing while reviewing all generated code.
- **Therapy-scheduling platform (React, Node.js):** resolved production bugs and built a feature that lets clients move into another therapy session even after their own session has started.
- **Online exam portal (React):** set up the initial code architecture and built the frontend over the first 6+ months, including automated grading and real-time results.

React Native Developer | Nanosoft Engineers Pvt Ltd, Coimbatore, India **May 2023 – Aug 2025**

Stack: React Native, TypeScript, Redux Toolkit, SQLite, AsyncStorage, Firebase

- Delivered 4+ production apps used by 2,000+ field technicians, with Redux Toolkit managing state across the app suite.
- Designed an offline-first sync architecture (SQLite, AsyncStorage, custom retry queues with exponential backoff), raising sync success in low-connectivity areas from ~30% to ~80%.
- Refactored legacy components and automated media compression, cutting UI latency by 30% and image payloads by 60%.
- Led 15+ Android and iOS releases through store review cycles, implementing encrypted local storage and security compliance checks.
- Built a customer visit-management app (photo capture, signature pad, real-time sync) and a GPS-aware attendance app with QR check-in and offline logging.

PERSONAL PROJECTS

- **Vaasi (Next.js, Django, PostgreSQL):** full-stack online bookstore where users buy a single book or a curated collection.
- **Akam Psychiatric Care Center (Next.js, Google Sheets API):** dynamic site where the admin updates projects, staff, and content through Google Sheets, with no code changes.
- **Computer Park (Next.js, Vercel):** business website for a corporate-gifting and printing company, structured to grow into e-commerce.

EDUCATION & CERTIFICATIONS

Master of Computer Applications (MCA), Online | Bharathiar University, Coimbatore **2024 – 2027**

MERN Stack Developer Certification (MongoDB, Express, React, Node.js) | N School Academy **2022 – 2023**

Master of Social Work (Medical & Psychiatry) | Bharathiar University, Coimbatore **2019 – 2021**

BSc Physics | Jamal Mohamed College of Arts and Science, Trichy **2016 – 2019**

ADDITIONAL INFORMATION

- Mentored 2 junior developers, conducting regular code reviews to maintain coding standards.
- Experienced working across India–Australia time zones with global teams; open to remote, hybrid, or on-site roles.
